## Space to your time.

We build the space around your time

Working, having fun, relations with others, relaxing - in a word: living.

A verb which conjures up the idea of space, of living space, of places to visit or in which to lay down roots. This was the theme of our presence at the 2015 Salone del Mobile.

Now, however, **Time**, which coincides with living, is our focus and theme at the 2017 Show.

The time dedicated to education, to work, to sports, to a relaxing evening with friends, to a trip to the theatre or an exhibition.

Thanks to our network of companies (CDN), we not only create spaces, but we do so for your time. Time which we help you to save and to optimise and to dedicate to activities which make you feel good.

Our ability to work in synergy and to manage the process from design to creation is what helps you to reduce the amount of time you usually dedicate to managing individual suppliers.

The Contract Design Network (CDN) brings together companies with solid experience, which work together in order to grow together.

We approach the project together and follow its development through a single interlocutor.

We create environments using the **craftsmanship** of companies which are certainly all Italian, but which also boast major **international experience**.

The CDN is present at the 2017 Salone del Mobile with a 400m2 stand, showcasing 6 of the companies in the group.

We are in Pav. 24, at stand D15 E12, in a prestigious position facing the installation "A Joyful Sense at Work", Workplace 3.0

Time is our theme this year and our entire area is designed to allow you to experience places in time. You can visit the stand following a route which takes you through the various stages of the day and invokes moments from day-to-day life. With the help of **technology** applied to **communication** and exciting videos, you will be immersed in our most important projects of the last year. Everything here is designed to allow you to interact with us. Take a journey of discovery into the world of the CDN.

CDN will be offering its customers and anyone who wants to join us a **party** on Thursday 6 April, from 6:30 to 9:00 p.m. An opportunity to forge new relationships and consolidate existing ones, in the informal and welcoming setting of our stand.

## ARESLINE

INNOVATIVE SEATING SYSTEMS

**Quality is a tradition.**

**We combine craftsmanship with the strength of a major industrial enterprise.**

We have been manufacturing office chairs and public area seating solutions for thirty years.

Focus on every **detail** and the possibility of **customising** the solutions is the result of research and continual attention to your needs.

All production phases of our models are carried out at our plants. We prefer to use the original materials and products of the **Venice Manufacturing District** where we can, thus reducing the impact of transport on the environment.

We are one of the few Italian companies in the sector which believes in a reduced, controlled and certified **production chain**. This guarantees an improved and continuous search for product innovation and increases the possibility of product customisation.

Our experience has allowed us to obtain important projects through the world, testimony to our professionalism.

Our belief in the need to supply a complete and high-quality service led us to create the **Contract Design Network (CDN)** in 2011, forging relationships with the leading sector companies, which are now our CDN partners.

We will be present as the CDN at the 2017 Furniture Show, certain in the knowledge that **teamwork** is a winning strategy.

Together, we have chosen to present the best of our most recent projects.

design Frigerio design

A handful of pieces for multiple uses. This is the concept behind BASE, a modular system devised to create protected individual or relational spaces in open-plan offices. To perform several activities with a single, versatile and modular system.

To create places to meet up, focus, relax or participate; affording privacy when necessary, or room for interaction and sharing as needed.

A free-standing, sound absorbing and modular system, which can be put together freely to suit specific requirements. It can be used as a simple sound screen, as a seat or a meeting space, since it is versatile by vocation.

A recreated space.

## Dyapason

design Giovanni baccolini

A minimalist theatre seat with a side which evokes the form of a tuning fork and the letter Y in its name. Its unusual feature is the limited volume.

The elegance and compactness of the tip-up seat become even clearer when it is closed, as it fits perfectly into the side without jutting out, maintaining the purity of the shape.

The clean-cut shape is accompanied by finishes which allow an infinite number of combinations of precious woods and comfortable coverings.

## Fonology

sound architecture

Close your eyes and listen to the architecture.  
Fonology is the connection point between sound and material.

Background noises which disturb your activities are an ever growing phenomenon.

Learning to listen involves the **acoustic ergonomics** of space, which can provide a state of mental and physical well-being.

Fonology acoustic comfort arises from an assessment of overall spatiality, from a global vision that considers every detail an opportunity to inspect the tones, timbres, reverb, absorption and insulation of sound.

We accompany you in choosing products which can be integrated with each other and offer maximum **freedom of creativity**, due to carefully designed finishes and decorations.

Innovative lines, colours and profiles bring the great aesthetic appeal of Italian style to highly **functional** elements.

Wood, concrete, wool, steel, mdf. In addition to traditional sound absorbing materials, we use and convert reflective materials par excellence, transforming them and enhancing them to their full acoustic potential.

This approach allows for the broadest **choice of materials**, the widest freedom of use, and above all, a new interpretation of sound absorption.

Fonology is an Ares Line brand and will be present as the CDN at the 2017 Salone del Mobile, certain in the knowledge that **teamwork** is a winning strategy.

Together, we have chosen to present the best of our most recent projects.

## PRA

design Sandro Rai

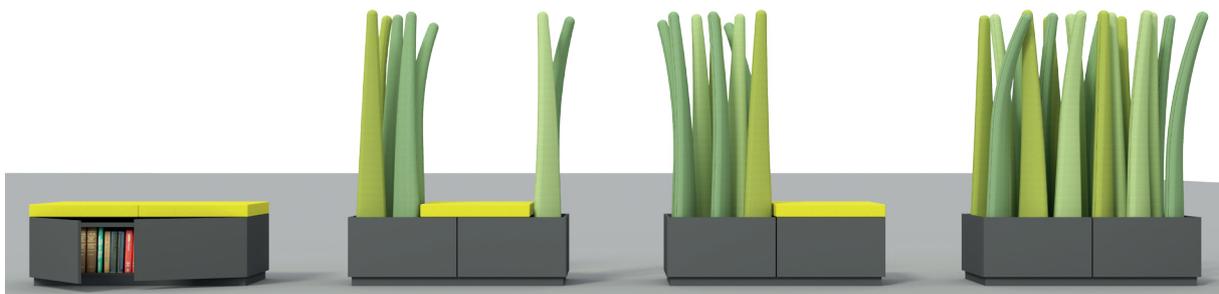

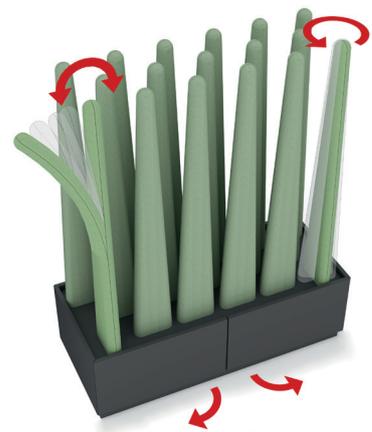

### Green soundproofing.

Fonology continues his quest offering a new product that combines acoustic comfort and design. 'PRA' is a compound of blades of grass with high soundproof power that yield excellent performance in open spaces.

The idea of the young designers Sandro Rai stems from the desire of wanting to take the forms of nature inside of everyday spaces. The product is designed for maximum modularity and is fitted according the needs and desires.

The base is designed to be a closed container or a library; the lawn can be interspersed with comfortable seat located above the base; the blades of grass covered with fabric have a metal structure that makes them flexible, and allows twists 360 ° C. Prà can leave you free to create your lawn, modulate your space and get incredible acoustic results.

Perfect in open plan offices, schools, halls, homes, has no limit in its applications.

## Masterpiece

Opera Alema

The most natural development of the Fonology strategy of constantly seeking and using a wide range of materials is something rare and unique: a **work of art**.

The result of collaboration between Opera Alema, the celebrated artists' workshop in Fano, and our technical team is a set of paintings with high **sound absorbing power**, which have been tested at specialist acoustic laboratories.

Manual skill, craftsmanship and a stroke of genius make them genuinely unique.

Opera Alema approached this project by creating panels with natural and non-natural materials, such as large tobacco leaves, lead, stones and glass.

No limit on creativity!

## foglia.oro

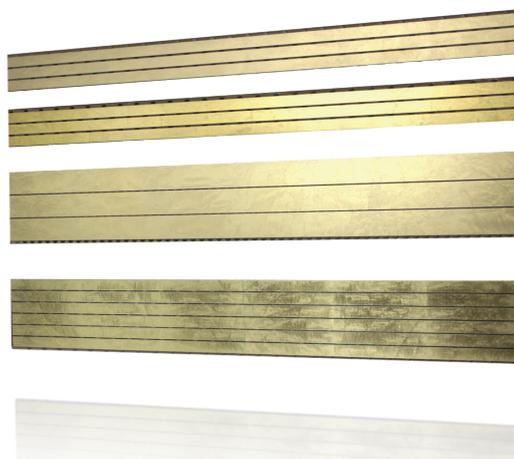

foglia.oro comes within the artistic research by Fonology.

The leaf is such a refined material that people who approach it for the first time often think that it is something false, something that appears to be gold or silver but that isn't really. That is not the case.

The leaf consists of **gold or silver particles**, that are compressed to produce very thin sheets.

Handling it and using it, is a complex task meaning that only the hands of **experienced artists** are capable of applying it effectively without causing it to oxidise, without spoiling it or creating unnatural ripples.

Applying it is a very complex matter, requiring a smooth surface with no impurities, no ripples and no dust. You have to use a special glue to make it grip the surface and lastly, the hands of our artists are play their part, taking the sheets one-by-one and applying them with delicacy and care over even the slightest surface. Finally, a few coats of protective varnish are applied that are required to secure the leaf and make sure it does not change over time, remaining protected against scratches and bumps.

## Tradition and innovation in designing cultural and learning environments

In 2014 GAM GonzagArredi Montessori took over the historic company Gonzagarredi and is now part of the FAMI Group of Rosà (VI), a company with four factories in Europe and Latin America and 500 employees worldwide.

GAM is today a national leader in the production of functional and stylish furniture for all types of libraries and in the participatory design for environments in libraries and schools. Our technicians collaborate with architects and librarians to create the best solutions for each architectural context. GAM has been dealing with the majority of Italian libraries and nurseries, and is enriched by the cooperation with experts in every field. The number of product lines, the versatility of products and the attractive design, the customization of furniture and environments enable us to furnish libraries and cultural centers all over the world.

## Vertigo

The first and unique patented metal screen fabric

Vertigo is a true synthesis of excellence: the exclusive combination of three different materials which combine the most sought features for external solar shading.

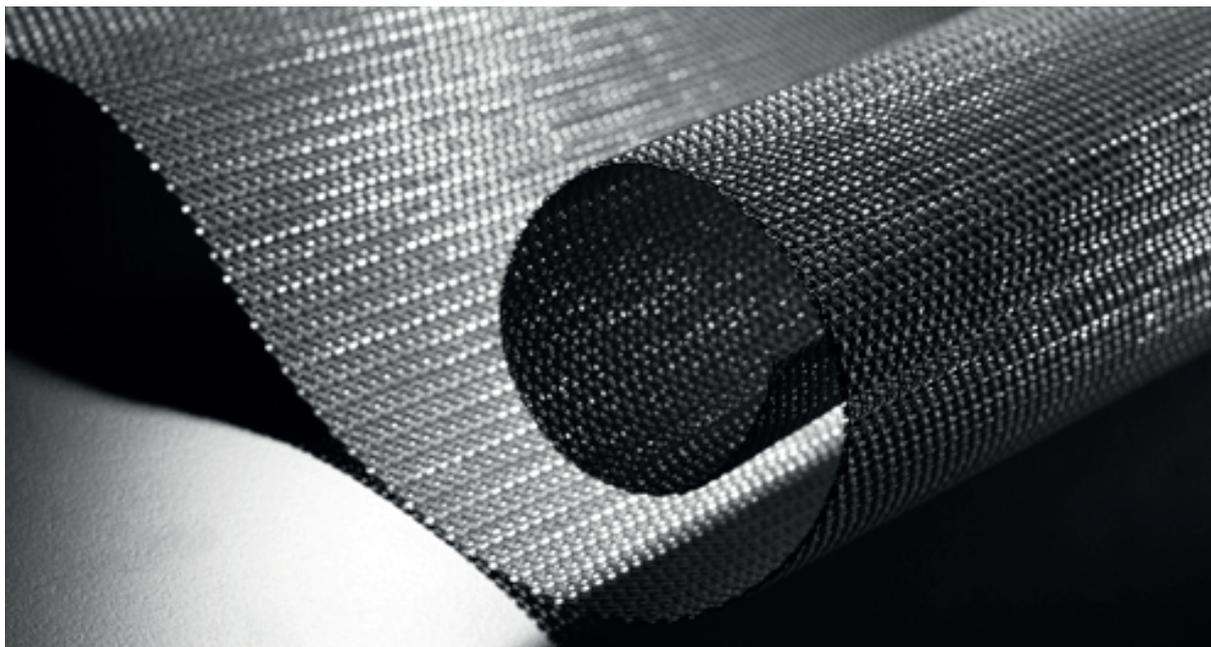

**Aluminum:** design, reflection, reduction of thermal load, low emissivity

**PVC and Polyester yarn:** flexibility, color, ease to handle

**Stainless steel:** resistance, dimensional stability, compactness.

The reduced weight and thickness of Vertigo will allow usage as a traditional screen fabric, with no increase of overall dimensions, or alteration of the winding and lifting mechanisms.

Thanks to its resistance Vertigo requires no maintenance.

## Ghost®

Elegance and performance

Ghost® is an extruded aluminium box for recess installation.

The motorised roller system IL852 fits perfectly into Ghost® hidden box, allowing the blind to completely disappear in the ceiling and leaving only a thin blade and the window space open.

The click in cover allows full inspection of the box and easy roller blind installation. Thanks to the patented bracket system with swivel interface, one or more roller blinds can be fitted in Ghost® hidden box in any position.

**Integrated multimedia solution and italian expertise on project management for collective spaces**

Design and technology, the words to describe MosaicoGroup.

Design as an expression of our Italian character. Integration of technological innovation as a distinctive working method. Our vocation is to provide integrated solutions for residential, commercial, cultural buildings. We approach each project as if it were a mosaic: with technological and multimedia expertise, we juxtapose an all-encompassing attention to aesthetics.

MosaicoGroup is a company that makes from its artistry, from the quality of product used and through its versatility of design and production processes, its factors of excellence and distinctiveness.

Created in 1999 as a natural haven of the previous experience of its founding members, MosaicoGroup is today a real system integrator: a unique reality, which boasts an absolute leadership in the development of advanced technological solutions. MosaicoGroup simplify and improve the experience of using all residential and professional environments. References of the highest level on a national and international scale are the best testimony of our quality standards. Our working philosophy has led us, year after year, to carry out projects of great importance and prestige in Europe and in the rest of the world. Proud to be able to combine the best Made in Italy with the needs of different cultures and nations, we ensure high quality to clients around the globe. We are happy to internationalize our Italian character. We are successfully implementing projects in Italy, France, Russia and CIS, North Africa, Kuwait, Qatar, etc.

### COLLABORATIVE WORK SOLUTIONS

MosaicoGroup offers custom-made solutions as collaboration and data sharing, conferencing and telepresence to connect and engage your workforce across the enterprise. Our solutions for Workplace 3.0 ensure effective collaboration and in real time with nomad collaborators, subsidiaries, clients, service providers or partners. Our integrated solutions in the field of the unified communication and collaboration, suitable for modern workplaces are simple to use and assure productive collaboration. We enable connected learning and collaboration solutions that support new patterns of education. Our solutions as videoconferencing, virtual interaction, voice, video and data sharing contribute to higher engagement, more motivation and creativity. We provide also additional facility management applications such as security, surveillance, CCTV, lighting and climate control systems for schools, universities and classrooms to best suit the needs of flexible new behaviours of learning and teaching.

The Italian and European excellence in design, production and installation of plastic seats for sport facilities and stadia

Since 1961, we design and manufacture seats in polypropylene and polyamide for school, community and sports facilities. Over the years, we have become the reference point of the Italian and international markets in our product segment, thanks to strong industrial investments aimed at the realization of solutions always new and innovative, the continuous research and study of the regulations in force and the development of a sustainable eco-system. Moreover, OMSI is not only involved in manufacturing but also offers the service of pre-assembly and / or installation at the construction site; around the world, skilled and experienced installation teams are able to satisfy all customer needs.
